Enhance the Mac Experience. Elevate IT, improve Security.

Simplify Mac at Work – Unifying Mac Management & Security for IT

Take Control of Mac management and security

Mac management in a Windows-first environment often means deploying tools that weren't built for Apple. This results in frustrated users, security gaps and extra work for IT.

With Jamf for Mac, IT can manage and secure their Mac fleet with a platform designed for Apple — while giving Security teams the telemetry and insights they need to ensure compliance, reduce risk and protect company data.

With Jamf for Mac, IT can:

Streamline Mac management and security under one platform.

Eliminate **Windows-first** security challenges for Mac users.

Give Security teams the insights they need and keep the **Mac experience native.**

Increase **productivity** and **reduce risk.**
